

Dirt is everywhere and it's free. The ground we walk on and grow crops in also just happens to be the most widely used building material on the planet. Civilizations throughout time have used it to create stable warm low-impact structures. The world's first skyscrapers were built of mud brick. Paul Revere, Chairman Mao and Ronald Reagan all lived in earth houses at various points in their lives and several of the buildings housing Donald Judd's priceless collection at the Chinati Foundation in Marfa, Texas are made of mud brick. Currently it is estimated that one half of the world's population—approximately three billion people on six continents—lives or works in buildings constructed of earth. And while the vast legacy of traditional and vernacular earthen construction has been widely discussed, little attention has been paid to the contemporary tradition of earth architecture. Author Ronald Rael, founder of EarthArchitecture.org, provides a history of building with earth in the modern era, focusing particularly on projects constructed in the last few decades that use rammed earth, mud brick, compressed earth cob, and several other interesting techniques. Earth Architecture presents a selection of more than 40 projects that exemplify new creative uses of the oldest building material on the planet. Rael's engaging narrative addresses the misconceptions associated with earth architecture. Many assume that it's only used for housing in poor rural areas—but there are examples of airports, embassies, hospitals, museums, and factories that are made of earth. It's also assumed that earth is a fragile, ephemeral material, while in reality some of the oldest extant buildings on the planet are made of earth. Rael also touches on many topics that pervade both architecture and popular media today, such as the ecological benefits and the politics of building with earth, particularly in developing nations where earth buildings are often thought of as pre-modern or backward. With engaging discussion and more than 300 images, Earth Architecture showcases the beauty and simplicity of one of humankind's most evolved and sophisticated building technologies.

Britain 1066-1500: Teachers Resources (Presenting the Past), Specimen chapters of an Assyrian grammar, Language Translations: Functional Terms in Occupational Therapy--German (Language Translation Series), Professional Child and Youth Care: The Canadian Perspective, The ABCs of Worship: A Concise Dictionary,

Vo Trong Nghia Architects has completed a house in Hanoi featuring walls made from different types of rammed earth, and gabled roofs incorporating planters. An earth structure is a building or other structure made largely from soil. Since soil is a widely available material, earth architecture is a building or other structure made largely from soil. The Conservation of Decorated Surfaces on Earthen Architecture: Proceedings from the International Colloquium Organized by the Getty. Dirt is everywhere and it's free. The ground we walk on and grow crops in also just happens to be the most widely used building material on the planet. The misconceptions associated with earth architecture is that many assume it's only used for housing in poor rural areas—but there are. earth architecture (14 articles). all news and recent projects about earth architecture having kept the existing earth walls, the architects reinforced them.

Earth architecture has illustrated many environmental, social and economic advantages that are currently hidden by many untrue speculations. Earth Architecture is a study devoted to the architectural uses of earth in shaping the environment of humankind, a subject closely related to human ecology.
